## Material flow systems for the highest demands

Our systems and components in the goods and material flows of our customers have been providing excellent, sustainable cost-efficiency for generations. Especially in the field of heavy and/or demanding goods the Baust combination of years of experience and innovative engineering provides you with significant benefits. From our systems that had been tested hundredfold we can develop your specifications further, driven by your individual objective. That way you will attain a conserving flow of material, the highest level of availability and a guarantee of innovation from the beginning.

Custom-made for  
your flow of goods

## Components

for effective rationalisation of your procedures

Our products have proven themselves by their technical perfection in daily use in all the important sectors of industry. Fundamental designing criteria for our developers are high performance capacity, low-maintenance and reliable uninterrupted operation as well as possibilities for adaptation to existing systems.

- The most modern individual engineering
- Low-maintenance, robust technology
- Top capacity, well-engineered functionality
- Integration into your ERP system for more efficiency
- Process testing through simulation
- Quality management according to DIN ISO 9001

## Innovations

for demanding transport assignments

Cooperation with Baust Materialflusssysteme provides you with the possibility to incorporate years of networked experience from all core sectors into your planning.

Utilise our process know-how for solutions that will bring you noticeable competitive advantages.

Our innovation capability is the result of years of consistent further development of trend-setting, individually adaptable system components. When material flow and output are closely linked in your company, you will know how to appreciate the benefits of our system lines.

- Baust** Materialflusssysteme Systems for powerful materials flow
- Baust** Rollen Perfect rollers and cylinders
- Baust** Automation State-of-the-art control systems
- Baust** Stanztechnologie Punching in record time

**Movement**  
in nature. Movement in business.

The difference is the precision with which man controls it. Baust system lines resolutely counteract the static force of gravity. It mobilises technology and intelligence to continuously move heavy loads and demanding work pieces. Powerful components are individually networked into systems. That guarantees the creative congruency of automated material flow and operational procedures.
